

Operations Division

The Operations Division is the "boots on the ground" personnel group that provides Fire, EMS, Dive Rescue, Technical Rescue and Hazardous Materials Response services to our citizens and those visiting the villages within the Greater Round Lake Fire

Protection District. Firefighters operate out

of our three strategically located stations and respond in a "Jump Company" deployment model.

This means that our firefighters are not assigned to just a fire apparatus or ambulance, but rather "jump" back and forth between the two based on the type and location of the incident.

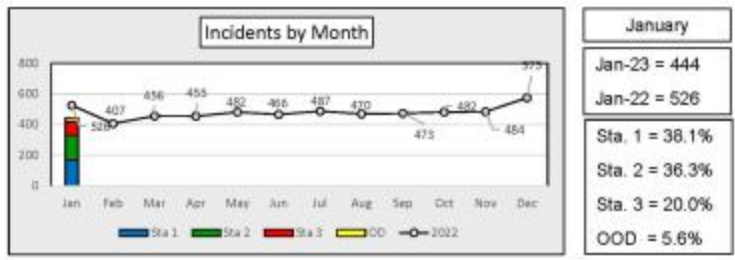

This prevents us from having to have a fire engine chase the ambulance to an EMS call - saving wear and tear on our most expensive apparatus.

Firefighter/Medics are assigned to work one of three 24-hour shifts - providing services 24 hours a day, seven days a week, 365 days a year. Each shift is led by a Battalion Chief that operates out of our Headquarters Station 1 and responds district-wide to incidents of significance.

While the majority of our incidents involve EMS services, fire response and motor vehicle crashes, the Operations Division must also be trained and equipped to respond to specialized rescue incidents such as trench & structural collapses, high-angle rescues (for example, a worker injured on a cell tower), confined space rescues, hazardous materials releases, boat accidents, drownings, and wildland fire responses. These types of incidents require specialized training and equipment beyond the scope of our normal operations. To meet these special needs, a number of Fire/Medics from our department are part of a larger county-wide team, the [MABAS Division 4 & 5 Specialized Response Teams](#).

Call Activity:

MONTHLY OPERATIONS REPORTS

The Greater Round Lake Fire Protection District responded to 5,763 emergency incidents in 2023. While gut feel would be to attribute this increase to the ongoing COVID-19 pandemic, call data showed that our Fire District actually saw a 22% drop in COVID related calls compared to 2021. Overall, our call volume increased 7.1% over the prior year, and 20.3% in the past five years. Our crews continue to meet the demands of the added call volume and respond to difficult incidents under adverse conditions on a daily basis with one goal in mind – *Make Things Better!*
